CORE SKILLS

Languages: Python, FastAPI, Flask, Node.js, TypeScript, SQL, Bash, C#/.NET

AI / Data: LLMs, RAG, embeddings, LangChain, ETL, pandas, NumPy, NLTK

CAD / Geometry: DXF, floor-plan extraction, measurement calibration, site-plan fit workflows

Search: Elasticsearch, OpenSearch, index design, relevance tuning

Cloud / DevOps: AWS ECS, Lambda, S3, IAM, CloudWatch, Docker, GitHub Actions

Methods: Scrum, Kanban, CI/CD, GitOps

LANGUAGES

Spanish: native

English: C1

Lucas Branchini

Software / AI Engineer

PROFILE

Backend, data and AI engineer with 7.5+ years of experience building production APIs, ETL pipelines, semantic search systems and AWS-based architectures. Current work focuses on AI-assisted CAD automation: converting floor plans into structured geometry, calibrating architectural measurements, and producing reliable AutoCAD-ready DXF/site-plan workflows.

EXPERIENCE

AI Engineer - Floorplan Fit / CAD Site Plan Automation

Remote - 2025 -> Present

- Built an AI-assisted CAD workflow that turns floor plans into structured geometry and AutoCAD-ready DXF output.
- Developed site-plan adaptation features including buildable-area validation, setback overlays, measurement calibration and adjusted DXF export.
- Combined computer vision, geometry processing, LLM-assisted workflows and local-first .NET/Avalonia tooling to support architect-facing review.

Lead Backend Engineer - ensolvers (Beternes platform)

Remote - Oct 2022 -> Present

- Lead a 7-person development team, planning sprints and ensuring continuous delivery under Scrum/Kanban.
- Designed and built REST APIs with FastAPI and Flask for an AI-powered wellness platform.
- Developed ETL pipelines and near-real-time data processing workflows with pandas, NumPy and NLTK.
- Managed Elasticsearch/OpenSearch indices and implemented semantic search with embeddings and RAG.

Freelance Backend / AI Engineer

Remote - Mar 2020 -> Sep 2022

- Delivered backend and microservice solutions in Python and Node.js/TypeScript for SMEs and startups.
- Built chatbots, augmented-search systems and reporting automation using LangChain, vector databases and RAG.

Software Engineer - Solvers

Remote - Jan 2019 -> Sep 2022

- Developed backend services, integrated data pipelines and optimized batch and near-real-time processes.

EDUCATION

Licentiate in Computer Science

Universidad Nacional del Centro de la Provincia de Buenos Aires - 2018 -> 2021
